919-609-2140 • joncristinziano@gmail.com • San Francisco, CA • www.linkedin.com/in/jonathan-cristinziano

EDUCATION

- University of Virginia Darden School of Business** - Charlottesville, VA **2024**
Master of Business Administration - Full-time MBA Program
• Lee R. Johnston Scholar - Awarded to one (1) second year student who displays exceptional entrepreneurial qualities
• Vice President, Entrepreneurship & Venture Capital Club
- North Carolina State University** - Raleigh, NC **2018**
Bachelor of Science, Chemical Engineering (Minor in Economics); Summa Cum Laude
• Completed engineering and supply chain focused summer internships at Novartis, CSL Seqirus, and Biogen
-

WORK EXPERIENCE

Amazon – San Francisco, CA

Senior Product Manager, Technical, Customer & Partner Trust **2025 - Present**

Led product strategy for AI/ML-based customer safety and risk assessment systems for Amazon's third-party seller business

- Authored and drove adoption of a three-year product vision to transform Amazon's reactive safety operations from a manual, linear-cost investigation model into an integrated, five-system AI architecture, spanning incident detection, unsupervised risk clustering, a continuously enriched knowledge graph, agentic investigation and enforcement, and expert-in-the-loop governance.
- Led development and launch of a global, two-stage AI classification pipeline that labeled safety incidents from 90M+ weekly customer feedback; our design effectively filtered 98% of feedback volume, saving ~\$13M annually in LLM inference costs while reducing false negatives by 22% and false positives by 77% versus the legacy solution.
- Spearheaded an unsupervised ML clustering system for proactive product risk assessment that identified 592 risk clusters across 24 high-risk categories with 87% coverage of products tied to 2025 liability claims; built an LLM prototype to semantically map clusters to product safety categories for data-driven launch prioritization.
- Designed an agentic AI investigation engine that automates structured, multi-step product safety investigations – projected to eliminate ~\$1.4M in annual cost-to-serve, improve decision consistency and reduce time-to-remediation from days to minutes.
- Leveraged Claude and AWS (Lambda, S3, Bedrock, Step Functions) to rapidly prototype an LLM classifier that labeled 400K+ historical feedback entries, saving three months of operations labeling time and four weeks of engineering and applied science effort.

Senior Product Manager, Technical, People eXperience & Technology **2023 - 2025**

Contributed to the strategy and development of Amazon A to Z, the company's employee mobile and web experiences

- Developed product strategy and feature roadmaps for the internal mobile and web apps that enable Amazonians to manage all aspects of their employment: Scheduling, Pay, Benefits, Time-Off, and more (over 1.4M daily active users).
- Executed a comprehensive three-year strategy for a self-service product analytics platform that reduced undifferentiated data engineering and business intelligence efforts by 75% (estimated three-year savings of \$3.4M).
- Launched a unified client-side telemetry platform for 40+ web tenants that consolidated user behavioral and operational monitoring into a single solution, eliminating duplicative data collection systems and enabling near-real-time error detection and alarming via CloudWatch – reducing time-to-resolution for client-side issues by over 40%.
- Led team of engineers in the delivery of a no-code customer journey analytics tool that enabled product managers to optimize their employee experiences, reducing employee workflow completion times by 20% (estimated year one savings of \$0.5M).

Uber – Washington, DC

Sr. Strategic Operations Manager, US Rideshare **2022**

Acted as Operations Lead for California taxi partnerships, coordinating across Product, Engineering, and BizDev teams

- Crafted the end-to-end driver and rider experience for a new taxi product offering in San Francisco that produced over \$50M in annual gross bookings by 2024.

- Developed financial models that incorporated insurance costs, driver earnings, and local taxes/fees to inform partnership negotiations with third-party taxi service providers (e.g., Curb).
- Calculated the minimum take rates needed to maintain parity with UberX financials and engineered creative cost-reduction solutions to maximize both Uber per-trip profitability and driver earnings.
- Coordinated a multi-week, phased product launch that included employee testing and an incremental ramp-up dependent on the successful accomplishment of key driver and rider side performance indicators.

Strategic Operations Manager, US Rideshare

2021 - 2022

Managed South US Ops (\$150M in weekly bookings) on initiatives ranging from product launches to regulatory reporting

- Automated driver background check adjudication by consolidating third party and internal data sources and deploying a cloud-based Python application, which reduced the daily manual effort by over 90%.
- Quantified the business impact of key regulator rulemakings and partnered with Legal and Policy stakeholders to develop data-driven, strategic responses to influence regulator decision making.
- Collaborated with cross-functional stakeholder groups on a product pilot that enabled taxi drivers to earn on the Uber platform in Washington, DC, increasing the city's potential driver pool by over 5,000.

Deloitte Consulting – Washington, DC

Consultant, Analytics & Cognitive Practice

2020 - 2021

Led team of three consultants and acted as principal client liaison in the analysis of Homeland Security revenue data

- Utilized multivariable econometric regression techniques to forecast user fee collections, informing FY21 financial plans in the onset of the COVID-19 pandemic and leading to an \$800M+ congressional stimulus package.
- Developed dynamic data visualizations to transform data into business intelligence solutions and presented results to a multitude of client audiences, including cross-agency budget analysts and C-suite leadership.
- Applied Python data cleansing techniques to automate the transformation and consolidation of 20+ incomplete or incorrect datasets into model-ready formats for recurring analyses.

Business Technology Analyst

2018 - 2020

Led a team of analysts in requirements gathering and system architecture initiatives for a \$7.7B Homeland Security client

- Developed a Model-Based Systems Engineering (MBSE) requirements management methodology that was piloted on 400+ hardware-software system requirements; created a tactical strategy for scaling the capability to eight government programs.
- Facilitated a workshop with over 40 high-ranking government and industry representatives, which led to the stand-up of three cross-industry working groups to develop future homeland security capabilities.
- Developed systems engineering market assets and prototypes for external business development in the Defense, Security, and Justice space, which led to three sold projects with an ROI of over 6000% to date.

PROJECTS

SimplyScrapps – Charlottesville, VA

2023 - 2024

- Launched a consumer app in grad school that rewarded residential composting through discounts from local businesses; grew it organically to 120 households (MAU), onboarded six partner businesses, negotiated collection services for a 300+ unit apartment complex, and secured over \$5K in university grant funding.

Tech Stack: Flutter, Firebase

SourceSMB – San Francisco, CA

2025

- Used AI coding agents (Cursor) to develop a data-driven SaaS product that helped search-fund entrepreneurs discover and analyze small businesses for acquisition by geography, category, and digital maturity using the Google Places API.

Tech Stack: React, AWS Lambda, DynamoDB, Bedrock, Claude

SKILLS

- Full Proficiency in SQL, Python, Jupyter, Microsoft and Google Suites, Cursor, Kiro, Claude Code, Amazon Web Services
- Basic Proficiency in Power BI, Tableau, Jira, Zapier, Google Cloud Platform, GitHub
- Enjoy reading investigative non-fiction, road cycling, surf fishing, traveling, and exploring the SF restaurant scene
